

# Automate Document Indexing with Continuous

Simplify lending operations, so your team can handle high volumes of complex, unstructured commercial loan documents with ease. Continuous automatically classifies, tags, and validates every file, so you can assemble complete, compliant loan packages without the bottlenecks or errors.

**Assemble organized, audit-ready loan packages with intelligent automation:** +-----

## DOCUMENT INDEXING AT SCALE

Automatically capture and index every document within a loan file—including attorney-prepared notes and borrower-supplied documents. Continuous removes the burden of manual review and guarantees consistency across all commercial loan packages. Your team can close and fund loans faster and more confidently, knowing every required document is in place before and after funding.

## SEAMLESS SYSTEM INTEGRATION

Continuous connects to the LOS, DMS, and core systems you count on. Ensure downstream processes start clean and stay aligned—eliminating rekeying, reducing IT friction, and giving you visibility across platforms.

## STAY PRODUCTIVE UNDER PRESSURE

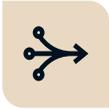

Continuous scales with your workflow. Intelligent automation keeps teams productive—even when volumes surge or attorney packages add complexity.

## Let loan ops do what they do best—and automate the rest

With Continuous automating your document indexing workflows, your team gains:

- ✓ Amplified indexing accuracy across document types
- ✓ Reduction in manual review time
- ✓ Exception-based reviews and the elimination of 100% review
- ✓ Fewer downstream exceptions and rework
- ✓ Confidence and control under audit pressure

## Scale securely and deliver with confidence

Seamless integration with your  
LOS, DMS, and core systems

Audit-ready documentation and  
traceable workflows

## Trusted by 1,600+ financial institutions
