

INTEGRATION

CIF 20/20

Overview

With OpCon's CIF 20/20 integration, you'll get faster, more accurate processing from the CIF 20/20 platform while spending less time managing it. As a result, you'll give your IT team time back to focus on strategic and growth initiatives instead of day-to-day operational tasks—saving you money, time, and resources.

Use Cases

- 1 Automate ACH batch posting**
Users can enable full automation of ACH transaction batch posting and control overrun and processing dates, which are needed for jobs like overnight processing.
- 2 Leverage cloud-hosted option with built-in disaster recovery**
Hosting OpCon in the cloud ensures your applications and data are protected by utilizing encryption at rest whenever possible. It takes care of and secures all your backups, so normal operations resume quickly in the event of a disaster.
- 3 Orchestrate CIF 20/20 end-of-day processing**
Our industry-leading, customer-driven IBM i agent creates even more value for IBM i users by orchestrating all your jobs as tightly integrated pieces of your whole environment, including CIF 20/20 end-of-day processing.
- 4 Respond automatically to critical IBM i messages**
OpCon's IBM i Message Management filtering rules and linked Data Capture and Response Rules make it easier for OpCon users to identify CIF 20/20 software messages that are critical for automated balancing functions, so you can respond automatically.
- 5 Consolidate scripting**
OpCon's dedicated script repository with versioning for all your Windows and Linux scripts provides a consolidated mechanism for all your scripting and related activities, manageable through the OpCon interface.

6 Trigger workflows in Self-Service portal

Self-service automation empowers users to trigger complex workflows with the push of a button, freeing the IT team from common requests and allowing them to scale their output.

7 Integrate automation into third-party applications

Speed up credit card processing, loan origination, and more. OpCon can process third-party batch files multiple times a day to keep systems up to date.

Key Features

File transfer automation

Self-service automation

Automated scheduling and ACH batch posting

Message management filtering rules

Event-triggered workflows monitor for incoming files

Data capture and response rules

IBM i agent orchestrates jobs throughout your environment

Ability to export/import agent configuration data

Script repository consolidates all scripting and related activities
