

INTEGRATION

FIS AffinityEdge

Overview

The FIS AffinityEdge platform offers a wide range of functionalities to support business operations, and when paired with OpCon's MCP mainframe agent, you can multiply your organization's operational efficiency and improve your productivity, customer service, and competitive advantage. OpCon offers world-class automation, robotic process automation (RPA), integration across multiple systems, and a single point of control.

Use Cases

- 1 Run all end-of-day processes**

Remove the need for staff to work late by automating end-of-day processing with OpCon. Event-driven workflows can rerun failed jobs and handle other contingencies. OpCon eliminates lengthy manual processes by helping to prevent payments to batch with automated payment sweeps.
- 2 Automate ACH processes**

Automation workflows in OpCon allow for unattended processing of ACH at the time of file availability from the Fed. Add more time back to your schedule rather than manually monitor, process, and post the files. With OpCon, you don't have to get to work early or leave late.
- 3 Integrate multiple platforms and applications**

Unite your tools, applications, legacy systems, and the cloud within a single interface. For example, integrate MCP, Windows, SQL, and VMWare tasks and easily view the workflow. OpCon can make virtually all applications and environments accessible with a connector, command, web service, or API.
- 4 Simplify file management**

When the core generates a file or needs to receive a file from other systems, OpCon coordinates the movement of data with sophisticated calendars and event triggers.
- 5 Allow end-users to initiate processes without IT intervention**

OpCon enables you to quickly automate workflows to reduce the burden on your IT staff. Most tasks can be automated in low code without scripting to save time and resources. And through OpCon's Self-Service feature, business users can trigger automated processes at the click of a button.

6 Generate statements and notices

With OpCon, you can easily generate statements and notices and send them to your vendors. If you use different vendors for each, OpCon can split the notices and statements. Then, it'll notify the appropriate departments when the process is complete.

Key Features

Automated scheduling for AffintyEdge batch jobs

WFL execution

Message management

Event management

File transfer automation

File arrival monitoring

"VyStar's business continuity plans are now reliable and no longer exposed to the risk of human error because of OpCon."

Alex Castanheira, Systems Administrator, VyStar Credit Union
