

Continuous Connector Program

Get a maintenance plan for every app touching your banking systems, built and maintained by Continuous.

400+ connectors
maintained by Continuous

5 business days
or less to update a connector

8 weeks or less
to deliver a new connector

The Problem

Most financial institutions use 50-100 third-party applications to run their operations, but connecting them isn't easy. Building custom connectors for each app takes time and money. Maintaining connectors as vendors make changes is a never-ending burden. Every unmaintained connector is a potential liability for your institution: a vendor update breaks a data feed, an integration goes stale, or an audit reveals access nobody remembers granting.

The Solution

Meet the Continuous Connector Program: a library of 400+ connectors for banking-specific apps—maintained by Continuous, ready to deploy.

- ✓ **Core banking:** Fiserv Premier, Fiserv DNA, Jack Henry SilverLake, Jack Henry Symitar, FIS Horizon, FIS IBS
- ✓ **Lending:** Blend, ICE, Sagent, MeridianLink
- ✓ **HR:** Workday, ADP, Paycom, UKG, Sage
- ✓ **Document management:** DocuSign, OnBase, Director, ImageCenter
- ✓ **Directories:** Active Directory, Azure AD/Entra ID, Okta, CyberArk

Built for Security-Conscious Teams

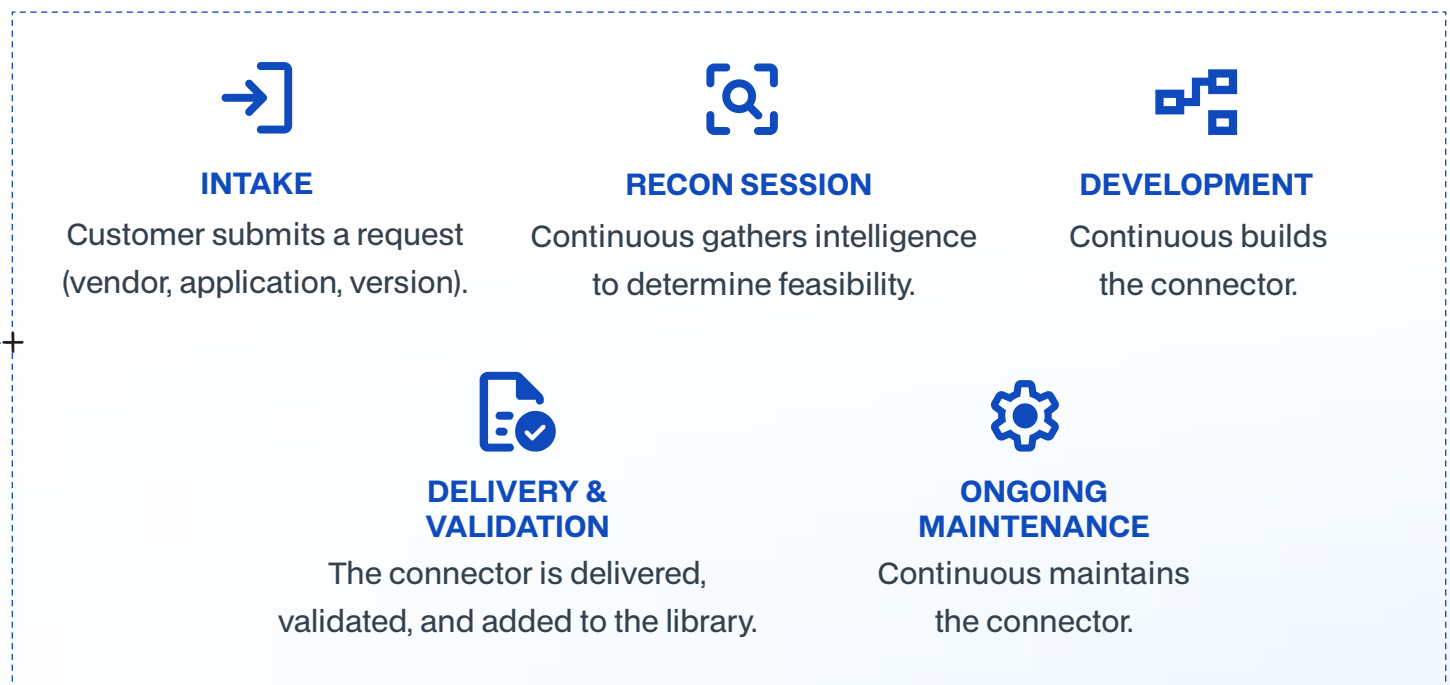

Connectors are read-only by default. Read-write access is only enabled when required. Every update is tested and validated before release, so nothing changes in your environment without our review. You always know what's connected, what it can access, and who's maintaining it.

Proven Delivery Process +

The Continuous Connector Program has a dedicated team of experts behind it, managing the existing connector library and building new connectors.

Vendor made a change to the app? [Continuous is on it.](#) When a vendor makes a change, our dedicated team provides an update to the connector within five business days. Maintenance is ongoing: nearly 20% of our connectors (85+ connectors) have been updated in the first half of 2026.

Need a new connector? [We make it easy.](#) Our process is expert-led and fully transparent, so you always know what's happening and why, in 8 weeks or less.

Ready to take connector maintenance off your plate?

Visit continuous.com.

The Continuous Connector Program is currently available for the Permission Assist product, which can be acquired through an executed Order Form, covering a) user and permission data from third-party applications, b) SSO/authorization platforms, and c) identity sources (HRIS, Active Directory, etc.). All connectors are at Continuous' sole discretion and must use a native or approved method of reading or interacting with third-party applications to be accepted into the Continuous Connector Program.
