

Permission Assist® + **fiserv.**

Know who has access across your Fiserv apps.

Every Fiserv product speaks its own dialect. The business people approving access can't interpret any of it. The IT people who can read it don't know what the job requires.

Permission Assist translates Fiserv system-specific authorization data into a plain-language view that IT and the business can both read.

Rubber-stamped reviews → Reviewers see plain-language access

Guesswork roles → Role models define what the job actually needs

Can't prove deprovisioning → Provisioning and deprovisioning, proven

IAM for the Fiserv Ecosystem

140 FINANCIAL INSTITUTIONS
IN PRODUCTION

40+ FISERV PRODUCTS
SUPPORTED
