

Permission Assist[®]

Know who has access. Know it's right. Prove it on demand.

The Problem

Access Governance Shouldn't Be This Hard +

Exam Pressure

You can tell examiners your access controls work, but proving it means manually pulling access lists from disconnected systems before every exam.

Cryptic Permission Data

Your supervisors are supposed to review their teams' access, but the reports are raw data nobody can interpret. Reviews become rubber stamps.

Personnel Event Gaps

When someone joins, leaves, or changes roles, you're calling admins across multiple systems, including your KeyStone admin. Just one missed personnel event may result in a regulatory finding.

The Solution +

One Place to Understand, Manage, and Prove Access

SEE EVERYTHING

Get one view of every identity across every app, including KeyStone. Permission data is translated into plain language that supervisors can understand and act on with confidence—no more spreadsheets needed.

ORCHESTRATE PERSONNEL EVENTS

Workflows flag staff changes and automatically route onboarding, offboarding, and approval across every system. For KeyStone specifically, Permission Assist connects directly via API. Approved changes can be pushed into KeyStone automatically—no more missed access.

PROVE IT

Complete audit packages are generated from every review and provisioning action, providing front-to-back traceability, ready for examiners on demand—no more scrambling come exam time.

Why Choose Permission Assist

Purpose-Built for Financial Institutions +

- 
The Deepest Connector Library for Banks and Credit Unions
 Continuous maintains 400+ connectors for banking-specific applications, taking the ongoing management of third-party app permissions off your hands. All your critical systems are covered, like Corelation KeyStone, Active Directory, and more.
- 
Role-Based Access Models
 Define and maintain the access each role should have across your credit union's apps. Then, reviews surface exceptions instead of everything from scratch.
- 
Purpose-Built for Community FIs
 This isn't a retrofitted enterprise tool. It's right sized for lean credit unions teams without dedicated IAM staff. Implementation takes one to three months, not a year or more, so your team stays focused on your members.

How It Works +

The Results +

Faster Reviews

Complete them in hours instead of weeks and catch exceptions faster.

Organized Personnel Events

Every personnel event—including changes in KeyStone—is accounted for, no more manual calls.

Exam-Ready

Have a complete audit trail anytime an auditor asks.
